

Circulon Launches Halo Range with LaserDefense™ Ceramic Non-Stick

Circulon, a leader in cookware best known for introducing the world's first hard-anodised non-stick cookware in 1985, has launched the new Circulon Halo with LaserDefense™ Ceramic Non-Stick range.

The all-new Circulon Halo range is the brand's first-ever ceramic non-stick collection that combines a pearl white, monochromatic finish with the superior cooking performance of LaserDefense™ non-stick technology, designed to perform as good as it looks, without compromise. The Halo range with LaserDefense™ ceramic non-stick is made without PFAS, BPA, lead or cadmium and delivers 50% longer-lasting non-stick release than leading ceramic competitors.

Each product is etched with Circulon's signature pattern of microscopic circular dots. The innovative texture forms a protective barrier that elevates utensils slightly above the surface of the pan, strengthening the ceramic non-stick surface making it 9x more scratch resistant and 6x more stain resistant than competitors and 50% longer-lasting release than leading ceramic cookware brands.

The new launch of the Halo Ceramic range closely follows research from Circulon which found 43 per cent of 2,000 adults admitted they worry about non-stick coating from the pot or pan flaking into the food due to not trusting non-stick materials in terms of safety (36 per cent). Circulon's revolutionary technology provides amateur chefs with the confidence to cook without the common frustrations of ceramic cookware.

Becky Firth, Head of Product at Meyer Group Limited, said "We've reimaged ceramic cookware for fearless cooks, delivering a non-stick innovation that's built to last. Halo's LaserDefense™ technology inspires confidence in the kitchen to sear, simmer, sauté and clean with ease, with the PFAS-free coating that provides adults with the same high-

performance cooking experience. It's a range that's stronger, sleeker and built for bold cooking."

Crafted with heavy gauge aluminium, the Halo range delivers exceptional heat distribution for fast, even cooking, no matter the recipe. Circulon Halo also features ergonomic stainless steel handles that stay cool on the stovetop, tempered glass lids for easy monitoring, and a thick, induction-compatible base to prevent warping.
