

SensilightPRO

The *Next* Generation of Permanent Hair Reduction

**Available from www.sensica.co.uk,
Boots, Current Body & Look Fantastic.**

Prices for £379.00

According to a recent survey 98% of people* noticed hair reduction after 8 treatments. Target hair at the source and enjoy permanently smooth and silky skin on your face and body with the **Sensilight PRO**, the most advanced, professional hair reduction system for home use by Sensica.

Make tricky shaving, messy waxing and painful exfoliating a thing of the past, with Sensica's Sensilight PRO, the next generation of pain-free, permanent hair reduction.

Using highly effective, FDA-cleared Reactive Pulsed Light (RPL™) technology that is based on Intense Pulsed Light technology (IPL), the same used by professionals, RPL™ is a combination of IPL and a unique skin tone and contact sensor that monitors and reacts to identify the most suitable energy level to user's skin tone and specific condition, to ensure they always get a safe, personalised and professional hair-reduction treatment, with complete confidence.

With a 4.5cm² treatment window for larger areas of the body, such as legs and arms, and a 2cm² precision tip with integrated UV filter to deliver a gentle, accurate treatment to smaller areas, such as the upper lip, chin and jawline, the cordless design gives beauty enthusiasts, full freedom of movement.

With up to 600 flashes between charges - an outstanding feature unmatched by any other device on the market - including a warranty of flashes for a lifetime, users can keep going for longer, achieving the safest, most effective and efficient results that targets each hair follicle at the source, for silky-smooth skin, guaranteed.

Uri Khilkov, Head of Project of the Sensilight device added "my mission was to create an effective, at-home hair reduction treatment, with safety at the forefront. Since these tools are used by many different users, it was essential to me that the device wasn't harmful, which is why we produced our RPL™ Technology, to ensure the device is 100% safe for every user, as it is responsive. Our sensors make sure that no flash is delivered if there is no skin contact, to save eyes from involuntary flashes, and to scan the skin tone during the whole treatment, to guarantee that each user's skin condition is suitable for the treatment."

With 83% of users reporting a reduction in regrowth*, getting professional hair reduction results at home has never been easier with the Sensilight PRO.

NOTE TO EDITORS:

*Results of Sensica's survey are available, upon request.

Sensica are the founders of innovative devices using proven, potent treatments to help beauty enthusiasts completely remove unwanted hair, fight the signs of ageing and firm up sagging skin; all from home.

Having been at the forefront of the professional medical aesthetics field for decades, Sensica are proud to have made professional, non-invasive technologies, available for personal use.

Each device in Sensica's line of revolutionary skin care and beauty devices is based on clinically proven, proprietary technologies that have been specially adapted for personal use, to bring its users clinic-grade techniques for clinic-grade results.

The superior experience delivered by their ergonomic, easy-to-use devices enables users to carry out treatments when they want, where they want, while still achieving visible, long-term results that they'll love.

Sensica's scientists and thought leaders are constantly working on new methodologies for breakthrough treatments for the face and body, finding improved ways to provide their technologies for home use, safely, simply and effectively.
