

Celluence® Body: Whole Body Skin Wellness & Firmness

"Offer your skin some luxurious TLC and nourishment with the 5 high purity natural molecules of Celluence Body"

LipoTherapeia, the skin tightening and cellulite specialists, are launching Celluence Body, the ultimate skin firming & wellness formulation, with five carefully selected natural active molecules, specific to skin firmness and overall whole body skin wellness.

- Hydroxyproline is the most important aminoacid in collagen and the hydroxyproline-rich peptide in the Celluence Body cream is proven to boost collagen and elastin levels in skin more than any other skin peptide
- Bioavailable cocoa flavanols, known for their antioxidant, microcirculation-boosting and collagen-protecting action, also enhance the effect of hydroxyproline
- Low-medium molecular weight hyaluronic acid, the optimum hyaluronic acid for the skin, maintains hydration and stimulates skin healing
- Beta-sitosterol protects and helps heal the epidermis...
- While wide-spectrum tocopherols (alpha, beta, gamma and delta) provide extra antioxidant protection

The first two actives together help with collagen synthesis and protection from degradation, thereby boosting and maintaining skin firmness. The last two actives together help soothe skin from external aggression. And the low-medium molecular weight hyaluronic acid is exactly the right size: not too "thick" (and superficial) and not too "thin" (and pro-inflammatory) either.

All five actives are carried in a luxurious cream base of precious and expensive extra virgin plum oil (as opposed to cheap artificial oil fractions in the vast majority of body skin products)

And this the make up of the brand new Celluence Body cream: high concentrations of five high-purity natural active molecules, specific to whole body skin firmness and skin wellness (as opposed to minute concentrations of actives in 99% of body skin products).

Celluence Body can be combined with [Celluence Legs](#), to nourish your skin with a group of another 9 natural, high-purity active molecules.

- Bioavailable curcumin (Turmeric extract)
- EGCG (Green Tea extract)
- Asiatic Acid + Madecassic Acid + Asiaticoside (*Centella Asiatica* extracts)
- Esculin (Horse Chestnut extract)
- Forskolin (*Coleus Forskohlii* extract)
- Chlorogenic Acid (Green Coffee extract)
- Liposomal caffeine

The two Celluence creams are based on 20 years of research & experience in skin tightening and cellulite with 3,000 clients and the assessment of 160 active ingredients over 24 months.

Apply daily to enjoy a firm, smooth, silky skin feel on your body, knowing that you also offer your skin an array of amazing actives in high concentrations for maximum benefit.

Perfectly combined with healthy eating, berry and vegetable smoothies and regular exercise, for healthier, firmer body skin.

"The idea behind Celluence Body is for you to apply a luxury cream in the knowledge that you also apply amazing natural molecules on your skin for firmness and whole body wellness, i.e. to offer your skin some everyday luxury with benefits", says [Georgios Tzenichristos](#), the creator of Celluence Body.

"Due to high cost of quality active ingredients, most body creams contain very little in the way of actives (in fact, many don't contain any actives at all), and this is where Celluence Body is different. By doing away with distribution costs, retail markups, expensive packaging and excessive marketing costs, we were able to only focus on active ingredients and the cream itself. The principle is to offer a cream packed with high purity, high concentration actives at a moderate price, providing accessible luxury and quality to all.", explains Georgios.

Celluence Body is contained in an airless recyclable bottle for maximum freshness and potency. It is absorbed within a couple of minutes and leaves skin hydrated for the whole day without any tackiness or greasiness.

Of course the cream is not tested on animals, does not contain any fragrance or questionable chemicals and is fully compliant to strict UK & EU regulations.

With normal application on the whole body an 100ml bottle (£27/\$36) will last about 18 days. Two 200ml bottles (£98/\$133) are sufficient for a five-week intensive course on the whole body. Four 200ml bottles (15% off, £167/\$226) are sufficient for a 10-week intensive course.

The Celluence Body creams are available exclusively from the LipoTherapeia website at lipotherapeia.com/skincare/body-plus.
